Patient Name	: **ASHUTOSH KUMAR**	Patient ID / Billing ID	: 795930 / 867391
Age / Sex	: 24 years / Male	Specimen Collected by	: Medibuddy
Ref. Doctor	: SELF	Sample Receiving Time	: 24 Feb, 2026, 06:59 a.m.
Client Name	: Medibuddy	Registration On	: 24 Feb, 2026, 06:59 a.m.
Sample ID	: 8645195	Reported On	: 24 Feb, 2026, 12:08 p.m.
		Date of Birth	: 28-06-2001

IMMUNOLOGY

TEST DONE	OBSERVED VALUE	UNIT	BIO. REF. INTERVAL	METHOD
VITAMIN D				
Vitamin D Total-25 Hydroxy (Serum)	**20.8**	ng/mL	Deficiency <10 ng/mL; Insufficiency 10-29 ng/mL; Sufficiency 30-100 ng/mL; Toxicity >100 ng/mL;	CLIA

Method: CLIA

Interpretation:

Vitamin D is a fat soluble vitamin and exists in two main forms as cholecalciferol (vitamin D3) which is synthesized in skin from 7-dehydrocholesterol in response to sunlight exposure and Ergocalciferol (vitamin D2) present mainly in dietary sources. Both cholecalciferol are converted to 25 (OH)vitamin D in liver.

Testing for 25 (OH) vitamin D is recommended as it is the best indicator of vitamin D nutritional status as obtained from sunlight exposure and dietary intake. For diagnosis of vitamin D deficiency it is recommended to have clinical correlation with serum 25 (OH) vitamin D, serum calcium, serum PTH and serum alkaline phosphatase.

During monitoring of oral vitamin D therapy-suggested testing of serum 25(OH) vitamin D is after 12 weeks or 3 months of treatment. However, the required dosage of vitamin D supplements and time to achieve sufficient vitamin D levels show significant seasonal (especially winter) & individual variability depending on age, body fat, sun exposure, physical activity, genetic factors (especially variable vitamin D receptor response), associated liver or renal disease, malabsorption syndromes and calcium or magnesium deficiency influencing the vitamin D metabolism vitamin D toxicity is known but very rare. Kindly correlate clinically, repeat with fresh sample if indicated.

Remark : Vitamin D is essential for the formation and maintenance of strong, healthy bones.
